What is Tumble Testing?

Tumble testing exposes your product to repetitive random free- fall in a controlled repeatable manner. These test are performed to determine a products ability to survive bumps a product might experience during its life

Applicable Test Standard:

IEC 68-2-32

What should be tumble tested?

For medical companies designing or manufacturing products such as:

- blood pressure indicators
- blood sugar level indicators,
- insulin pumps
- hearing aids
- handheld remote devices
- Bench Top devices
- Bedside monitors.
